Applied Behavior Consultants
ABC Center Singapore

Over 22 years of service for children with autism in 4 continents worldwide

Applied Behavior Consultants
ABC Center Singapore

Our Mission Statement

Our goal is to unlock the full potential of every child in our care. We provide cutting-edge Applied Behavior Analysis (ABA) services with compassion for children with autism and other developmental disabilities to enhance their quality of life.

Our Services

- **ABA Intensive Behavioral Program** - for children with Autism, ASD (Autism Spectrum Disorder) or other similar disorders between the ages of 3 and 12. This is a language-based ABA program, individually designed for each child. Each program enables critical language skills, functional activities, socialization, initiation, spontaneity and generalization of mastered skills.
- **Early Intervention Behavioral Program (EIBP)** - for children from 24 months to 3 years. The program is intended to increase the child's behavioral repertoire to ultimately be successful in the school or home environment.
- **Infant Toddler (IT) Program** - designed for infants from birth to 24 months who exhibit autistic-like behaviors, who are at-risk for a diagnosis of autism or who have a diagnosis on the Autism Spectrum.
- **Classroom Consultation and Shadowing** - Visit, shadowing and consultation on the child in the neighborhood school. Consultation may be limited to one or two areas of focus (such as PECS or the reduction of behavior excesses), or may encompass the design and monitoring of an intensive behavioral program.
- **Parent and Caregiver training seminars** - to enable parents and caregivers to more effectively manage and care for their children at home.

Our Results

Consistent with over 40 years of scientific data from the field of Applied Behavior Analysis, ABC Inc. finds that all children in our care make progress with ABA.

- 100% of children in our program are effectively communicating their wants and needs within one year, either vocally and/or by PECS, and sometimes ASL (American Sign Language) or other types of language assisted devices.
- 90% are eventually transitioned to either a mainstream or special education school.
- If ABA is started at an early age, a significant number is transitioned to attending regular school with same age peers.

Visit www.abccentersingapore.com for more detailed results on our programs.

In the News: ABC US operation feature, Newsweek, July 31, 2000

US Surgeon General says:

ABA is most proven method for autism (1999, US Department of Health).
